

TRUPON[®] SNF

Synthetic neatsfoot oil

Basis:	synthetic lubricants
Appearance:	light yellow colored fluid oil
Active matter:	100 %

Properties:

TRUPON SNF is a water insoluble oil, which has similar properties like the natural neatsfoot oil.

TRUPON SNF exhibits excellent fibre substantivity, which is especially beneficial for leathers intended for vacuum drying.

If applied together with common, emulsify-able fatliquors, **TRUPON SNF** will improve fullness, handle and softness of the leather.

Application:

TRUPON SNF should be pre-mixed with an emulsifier or with an emulsify-able fatliqor before emulsification in 5 times their own volume of water at approx. 50 °C.

We recommend that prior checking of emulsion stabilities be carried out before addition to the fatliquoring vessel.

Safety and storage:

When handling **TRUPON SNF**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

TRUPON SNF can be stored for up to 18 months, if temperatures below 5 °C and above 40 °C can be avoided. On prolonged storage or extremes of temperature **TRUPON SNF** may exhibit some settlement which can be rectified by either warming and/or stirring the product thoroughly before use.
