

TRUPON[®] CON

fatliquor for all softy and floater type leathers

Basis:	sulphated synthetic raw materials, phospholipids and special softening components
Appearance:	red brown, semi viscous oil
Charge:	anionic
Active matter:	approx. 90 %
pH value(1 : 10):	approx. 7
Acid stability:	medium
Salt stability:	medium
Light fastness:	good
Heat yellowing:	medium

Properties

TRUPON CON is an anionic fatliquor designed to produce outstanding softness on all types of leathers. Leathers fatliquored with **TRUPON CON** exhibit excellent inner softness and fluffy handle coupled with extremely fine grain characteristics.

TRUPON CON is highly suited for the production of 'super soft' shoe upper and 'floater' style leathers. When used in the production of garment leathers, **TRUPON CON** imparts a cloth-like handle, excellent drape with a smooth creamy grain.

Application:

TRUPON CON should be prepared for use by adding it to a minimum of five times its own volume of water of 50 °C whilst stirring.

TRUPON CON is designed for use as a main fatliquor. We would not recommend it to be used in chrome retanning baths nor with the addition of raw oil.

Safety and storage:

When handling **TRUPON CON**, normal safety precautions associated with the handling of chemicals should be observed. For more specific details please refer to our safety data sheets.

TRUPON CON can be stored for up to 18 months if temperatures below 5 °C and above 40 °C can be avoided. On prolonged storage or extremes of temperature **TRUPON CON** may exhibit some settlement which can be rectified by either warming and/or stirring the product thoroughly before use.
